INSTRUCTIONS:

The CLUES given below have blank spaces in them. The answers for these are hidden in the grid above. All you have to do is to find out these answers and mark them. They could be vertically upward or downward and horizontally forward or backward.

To make it clear the first one has been done for you

CLUES:

1)  1. Area of _____ = (side)²

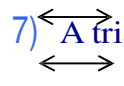

2) A triangle with all sides equal is called an _____ triangle

3) Area of _____ = 3.14 x r².

4) A triangle which has two sides equal in length is called an _____ triangle.

5) Angle less than 90 degree is called an _____ angle

6) A polygon having six sides is called _____.

7)  A triangle whose all sides are different in length is called _____ triangle.

8) The lines that never intersect are called _____ lines.

9) All angles in a rectangle measure _____ degrees.

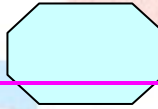

10) A polygon having five sides is called a _____.

11) Sum total of all angles of a _____ is 180 degrees

12) Angle more than 90 degrees is called an _____ angle.

13) Area of a _____ = length x width.

14) A polygon having eight sides is called an _____.

15) All angles in an equilateral triangle measure _____ degrees.

16) The name of the website that you are surfing is www._____.net
